

The LAAS robotics platform

Matthieu Herrb

22 June 2018

Total staff: 600 - researchers: 450 - Engineers/support: 150

Eight research departments:

- > Crucial Computing
- > Networks and Communication
- > **Robotics**
- > Decision and Optimization
- > Energy Management
- > Technology and Instrumentation for the Monitoring of Complex Systems
- > Micro Nano Bio Technologies
- > Microwaves and Optics: from Electromagnetism to Systems

3 technical services:

- > TEAM - Techniques et Équipements Appliqués à la Micro-Électronique
- > **I2C** - Instrumentation Conception Caractérisation
- > **IDEA** - Informatique Développement Exploitation Assistance

Platforms:

- | | |
|--------------------------------------|------------------------------|
| > Micro and nano technologies (TEAM) | > Bio Characterization (I2C) |
| > Characterization (I2C) | > Design (I2C/IDEA) |
| > Network (IDEA) | > Robots (I2C/IDEA) |

Driven by steering committees associating Researchers and Engineers.

Experimental facilities of the robotics theme.

- > Two equipped experimental halls
 - motion capture, apartment model, drone arena, safety devices,...
 - 3 humanoid robots,
 - 5 indoors wheeled robots w/arms
 - 3 outdoors exploration robots
 - several drones.

- > Software environment

Links with other platforms
(Robotex, ²2RM, Terrinet,...)

- > Equipment, production, maintenance, training
- > Need for reactivity and sustainability
- > Various areas of expertise:
 - mechanics
 - electronics
 - computer science
 - embedded systems
- > Funding of large equipments by the research teams
- > Operating budget (maintenance / troubleshooting, small equipments)

The “robots-admin” team

- > 2 research engineers in electronics
- > 4 research engineers in computer science
- > support from technical workshops (electronics and mechanics)
- > + contributions from PhD students and post-docs.

Current robots

HRP-2

Pyrène

Mana

ART

Jido

Mummer

Minnie

Max

Bob

Momo

- > Motion capture systems
- > Crane (safety for humanoid robots)
- > Reference station for centimetric Global Positioning System
- > Kuka Light Weight Robotics arms
- > Dedicated network and Wi-Fi environment
- > Ambient cameras and 3D sensors
- > Large display screens
- > 3D printer
- > ...

GNU/Linux systems, C & C++, python languages

Tools: Tcl/Tk, OpenCV, boost, ROS, gazebo, Matlab, git, redmine. . .

Developed at LAAS:

- > *General:* Genom3, OpenPRS, Morse, Robotpkg
- > *Humanoid robots:* Humanoid Path Planner, Stack of Tasks, Pinocchio
- > *Human/Robot Interaction:* HATP, FAPE
- > *Aerial Robots:* Telekyb3

→ <http://www.openrobots.org/>

- > Meetings:
 - Technical (robots-admin + users): 1 per month
 - Steering committee (Team Managers + platform representatives): 1 per year
- > Mailing-lists:
 - `robots@laas.fr`: direct exchanges between all users
 - `robots-admin@laas.fr`: support requests to the platform team
- > Intranet wiki: <https://wiki.laas.fr/robots/>
- > Free software distribution <http://www.openrobots.org/>
- > Yearly training on the use of robots and software

Sample achievement: Robotpkg

robotpkg: compilation and packaging framework for robotics software

- > packages LAAS developed software or 3rd party
- > handles dependencies and updates
- > continuous integration
- > binary package build farm
- > support for different Linux distributions
- > 400+ existing packages

robotpkg bulk build results

Summary (browse by category or all)

Platforms	Available	Not available	Broken (by others)	Total	Date	Time	Last update	Updates	On Air	Log
CentOS-7- <i>amd_64</i>	351	94	0 (0)	445	2018/06/19	10:32:28	-	Running	-	-
Debian-9- <i>amd_64</i>	377	63	1 (0)	438	2018/06/19	10:32:15	-	Running	-	-
Fedora-26- <i>amd_64</i>	364	80	1 (0)	445	2018/06/19	10:31:38	-	Running	-	-
Fedora-27- <i>amd_64</i>	355	90	0 (0)	445	2018/06/14	11:39:38	45	Idle	View	-
Ubuntu-17.10- <i>amd_64</i>	315	125	0 (0)	440	2018/06/19	10:31:52	-	Running	-	-

Sample achievement: Instrumenting Mana

- > Bare Segway RMP-400.
- > Integration of equipments done by the robotics platform.
 - Power distribution,
 - Safety devices (bumpers, radio emergency stop,...),
 - *Velodyne* laser telemeter, Cameras, *Novatel* RTK GPS, *Xsens* IMU, *KVH* optical fiber gyroscope, PTUs. . .
 - Embedded PC (*Core I7*), wifi adapter,,...
 - Software development for the control of the mobile base and sensor data acquisition (using *GenoM*)

The Platform can be used by collaborative research projects involving LAAS

- > formal projects (ANR, European projects like H2020,...)
- > direct collaborations with other research institutions or industrial partners
- > visiting PhD students or researchers

The steering committee can be asked to validate an access request.

- > Outdoor aerial drone arena
- > Mobile manipulators
- > ROS2 integration (software)
- > More cooperation with similar platforms
